

CAPABILITY STATEMENT

Underground mining equipment overhauls,
component repair and new parts supply.

RUTHERFORD, NSW / HUNTER VALLEY

barmining.com.au

SPECIALIST REPAIRS. PRACTICAL SUPPORT.

Mining component repair and overhaul with a focus on turnaround time, accountability and reliability. General engineering, manufacture and maintenance supported by experienced tradespeople.

01 EQUIPMENT OVERHAUL

Overhaul support for underground coal mining development equipment.

- + Coal cutting machinery
- + Continuous miner components, cutterheads and gearboxes
- + Shuttle car gearboxes
- + Drive systems

02 INVENTORY & PARTS

Sourcing and supply to support maintenance, repairs and rebuilds.

- + Critical components and spare parts
- + Service exchange programs
- + Trusted specialist supplier network

03 BREAKDOWN SUPPORT

Rapid response to restore equipment to operational condition with minimal disruption.

- + 24-hour customer support
- + Fault identification and repair
- + Direct communication with tradespeople

04 SERVICE DELIVERY

Practical solutions built around operational needs.

- + Reduced downtime
- + Single point of accountability
- + Quality-controlled work
- + Cost-effective solutions

THE PEOPLE BEHIND THE REBUILD.

Family owned. Owner operated.

Bar Mining is a family owned and run business led by experienced tradespeople with strong backgrounds in mining equipment repair, overhaul and maintenance. Work is carried out and overseen by the people responsible for delivering it.

25+

Combined years of experience

13+

Years of director experience

Managing Director Blake Rutherford brings more than 13 years of hands-on experience in component repair, rebuilds and field service support. His direct involvement supports quality, accountability and clear communication from start to finish.

Our qualified team has worked across gearboxes, drive systems and underground development machinery. A lean operating structure supports competitive pricing, faster decisions and consistent attention to detail. Clients deal directly with the people completing the work.

CARE AT EVERY STAGE. CONFIDENCE IN EVERY REBUILD.

Safety, risk management and quality control are embedded in workshop and site activities, with a proactive focus on protecting people, equipment and operations.

SAFETY IN DAILY OPERATIONS

- + Pre-starts and toolbox talks
- + Job-specific risk assessments
- + Safe Work Method Statements (SWMS)
- + Ongoing hazard identification and control

A CONTROLLED OVERHAUL PROCESS

- + Inspection and assessment before work begins
- + Defined hold points throughout repair
- + Measurement, testing and verification of critical tolerances
- + Non-destructive testing
- + Final inspection and sign-off before delivery

Consistent controls support reliable performance and help reduce rework and premature failure.

HUNTER VALLEY BASE. WIDER REACH.

Our fully equipped 400 m² workshop in Rutherford supports major component overhauls, including gearboxes, drive systems and continuous miner components. The Hunter Valley location supports rapid response, efficient mobilisation and practical transport arrangements.

WORKSHOP CAPABILITIES

- + Heavy component handling with mobile crane capacity
- + Disassembly and rebuild area
- + Machining capability
- + Hydraulic pressing and assembly equipment
- + Precision measurement and inspection tooling

SERVICE COVERAGE

Hunter Valley / Illawarra
Gunnedah Basin / Central Queensland

Work is predominantly workshop based, with components transported to and from site for controlled repair conditions and efficient turnaround. Our specialist supplier network allows us to scale capacity while maintaining a single point of accountability.

EXPERIENCE YOU CAN SEE.

Extensive hands-on experience with JOY equipment, particularly continuous miners and underground development systems. Our experience also spans conveyor and material handling systems, hydraulic assemblies and mechanical equipment.
